MUSICANOTE · Online Score Tools

Score Tools That Keep the Original and Reproduce

The original MusicXML is never changed, and every derived score or excerpt is recorded so it can be rebuilt from the same source. Designed for lesson material, research excerpts and presentations.

Pipeline

1 Snapshot
The original file stays untouched; parts, bars and notes are referenced by fixed positions

2 Recipe
Transposition, selection and range as absolute values against the original

3 Re-Extract
Taken again from the original; key, metre and clef restored in the first bar

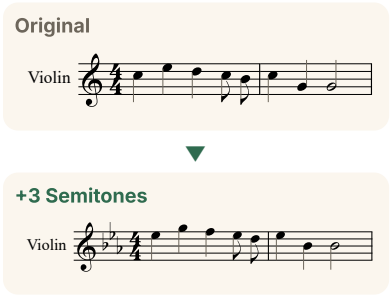

4 Re-Engrave
Only the chosen part is redrawn as clean notation — not a screen capture

5 Output
PDF, PNG, JPG, SVG; selected-part MusicXML; source-map JSON

Three Tools

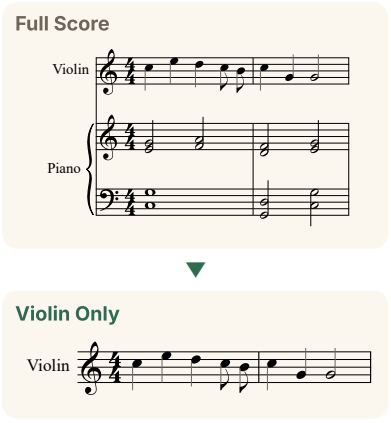

Transpose

−7 to +7 semitones from the original; playback and search highlights follow.

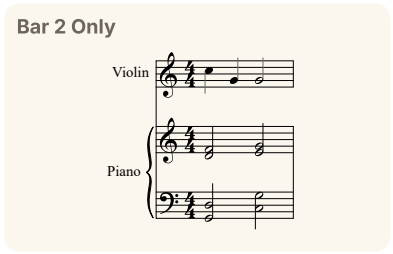

Parts, Staves, Voices

Several parts, staves, voices and a continuous bar range.

Bar Images

One line / width-based wrap / 2–12 rows / manual breaks; hide lyrics or dynamics.

PDF PNG JPG SVG

Operation and Limits

- Permission decisions sit in one policy object, ready to become a server-side check
- Each excerpt keeps its recipe and source map, so its origin can be traced
- Saving transposed MusicXML is not offered yet
